Chemical Biology Consortium Sweden, CBCS (www.cbcs.se), is a national infrastructure for chemical biology with focus on small molecule screening and compound optimization and profiling. CBCS aims to produce high quality pharmacological tools in collaborative academic projects by providing expertise in assay development, screening, medicinal and computational chemistry and pharmaceutical profiling. We will present an overview of the national infrastructure, which at present is composed of three nodes located at Umeå University, Uppsala University and Karolinska Institutet. In addition, some early screening results from collaborative projects will be presented.
